

terrasym[®] 401[™] for SOYBEANS + DUST[™]

PLANTER BOX APPLICATION

401-4-160-D

Terrasym[®] 401+DUST[™] for Soybeans from NewLeaf Symbiotics[®] in partnership with Low Mu Tech[™] is recommended for dry planter box application at a label rate of 0.5 oz per unit of soybean seed, and can be applied in all planter types, **excluding soybean brush meter units**. When used as directed, each 1.25 lb (0.6 kg) pouch of Terrasym 401+DUST for Soybeans covers 40 units of soybeans at 140K seeds per unit. All Terrasym products contain living microbes called pink pigmented facultative methylootrophs, or PPFMs, and should be treated as “live.”

These instructions are designed for use with the scoop included with the Terrasym 401+DUST packaging.

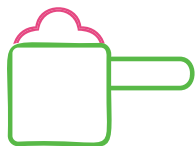

PLANTER BOX DIRECTIONS FOR USE

INDIVIDUAL/SINGLE ROW UNITS APPLICATION

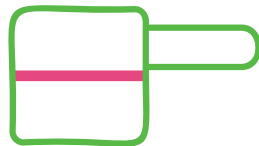

1. Remove provided scoop from packaging and determine if you received a small (60 cc) scoop or a large (4 oz) scoop*, by reading the number marked on the bottom of the scoop.
2. Using the provided scoop and application rates listed in the graphic below, sprinkle Terrasym 401+DUST for Soybeans into the individual/single row unit and stir gently for uniform seed coverage.

*Provided scoops reference volume measurements versus the weight measurements used in Terrasym product application. This Terrasym product should be applied using the amount indicated in the graphic only. Do not use provided scoop for any calculations.

Small (60 cc) Scoop

Apply one (1) rounded scoop of product for every two (2) units of seed.

Large (4 oz) Scoop

Apply one half (1/2) scoop of product for every two (2) units of seed.

BULK APPLICATION (40 UNITS OF SOYBEAN SEED)

Open one 1.25 lb (0.6 kg) pouch of Terrasym 401+DUST for Soybeans and gently mix product into 40 units of soybean seed, alternating between pouring soybean seed and product for uniform seed coverage.

DISPOSAL

Dispose of any remaining product and packaging in accordance with local/regional national/international regulations.
